## Swift Water Rescue Operator (SRO)

Nationally accredited training course delivered by highly experienced industry specialists.

This 4 day training course covers three nationally accredited units in order to become competent as a Swift Water Rescue Operator. The program centers on WHS issues in the workplace – where the workplace is in, on and around rivers and streams and waterways (both natural and constructed).

The program also provides graduates with the skills to select from various rescue options and then carry out rescues in a team environment. The focus is first on personal safety and whitewater awareness, with focus shifting to rescue once personal skills are established. We are able to customise the course to suit the various types of workplace hazards found in a wide range of workplaces around the country. As trained professionals SRO's are also highly advised to undertake regular refresher courses to maintain/update skills.

Day 1 classroom based theory training,

Days 2 – 4 hands on rescue skills (if delivered in Cairns, this will be on the Tully River)

### Nationally accredited units are:

SISOWWR201A	Demonstrate white water rescue and recoveries
SISOWWR302A	Demonstrate self-rescue skills in white water
SISOBWG404A	Apply river crossing skills

For members of specialist teams performing roles and functions as public safety workers in relation to emergency response capacities we offer the following required units:

PUASAR033	Perform land based swift water and flood water rescue and recovery
PUASAR034	Undertake swift water and flood water rescue and recovery

**Please contact us for course specific quotations.**

## Our Instructors

Our instructors are not just trainers. They have been involved in the rafting and rescue industries for many years. They are active members of a rescue organisation and as such bring with them specialist knowledge in this field.
